

RADICOOOL

The Radicool Difference

Lightweight and Breathable Hats

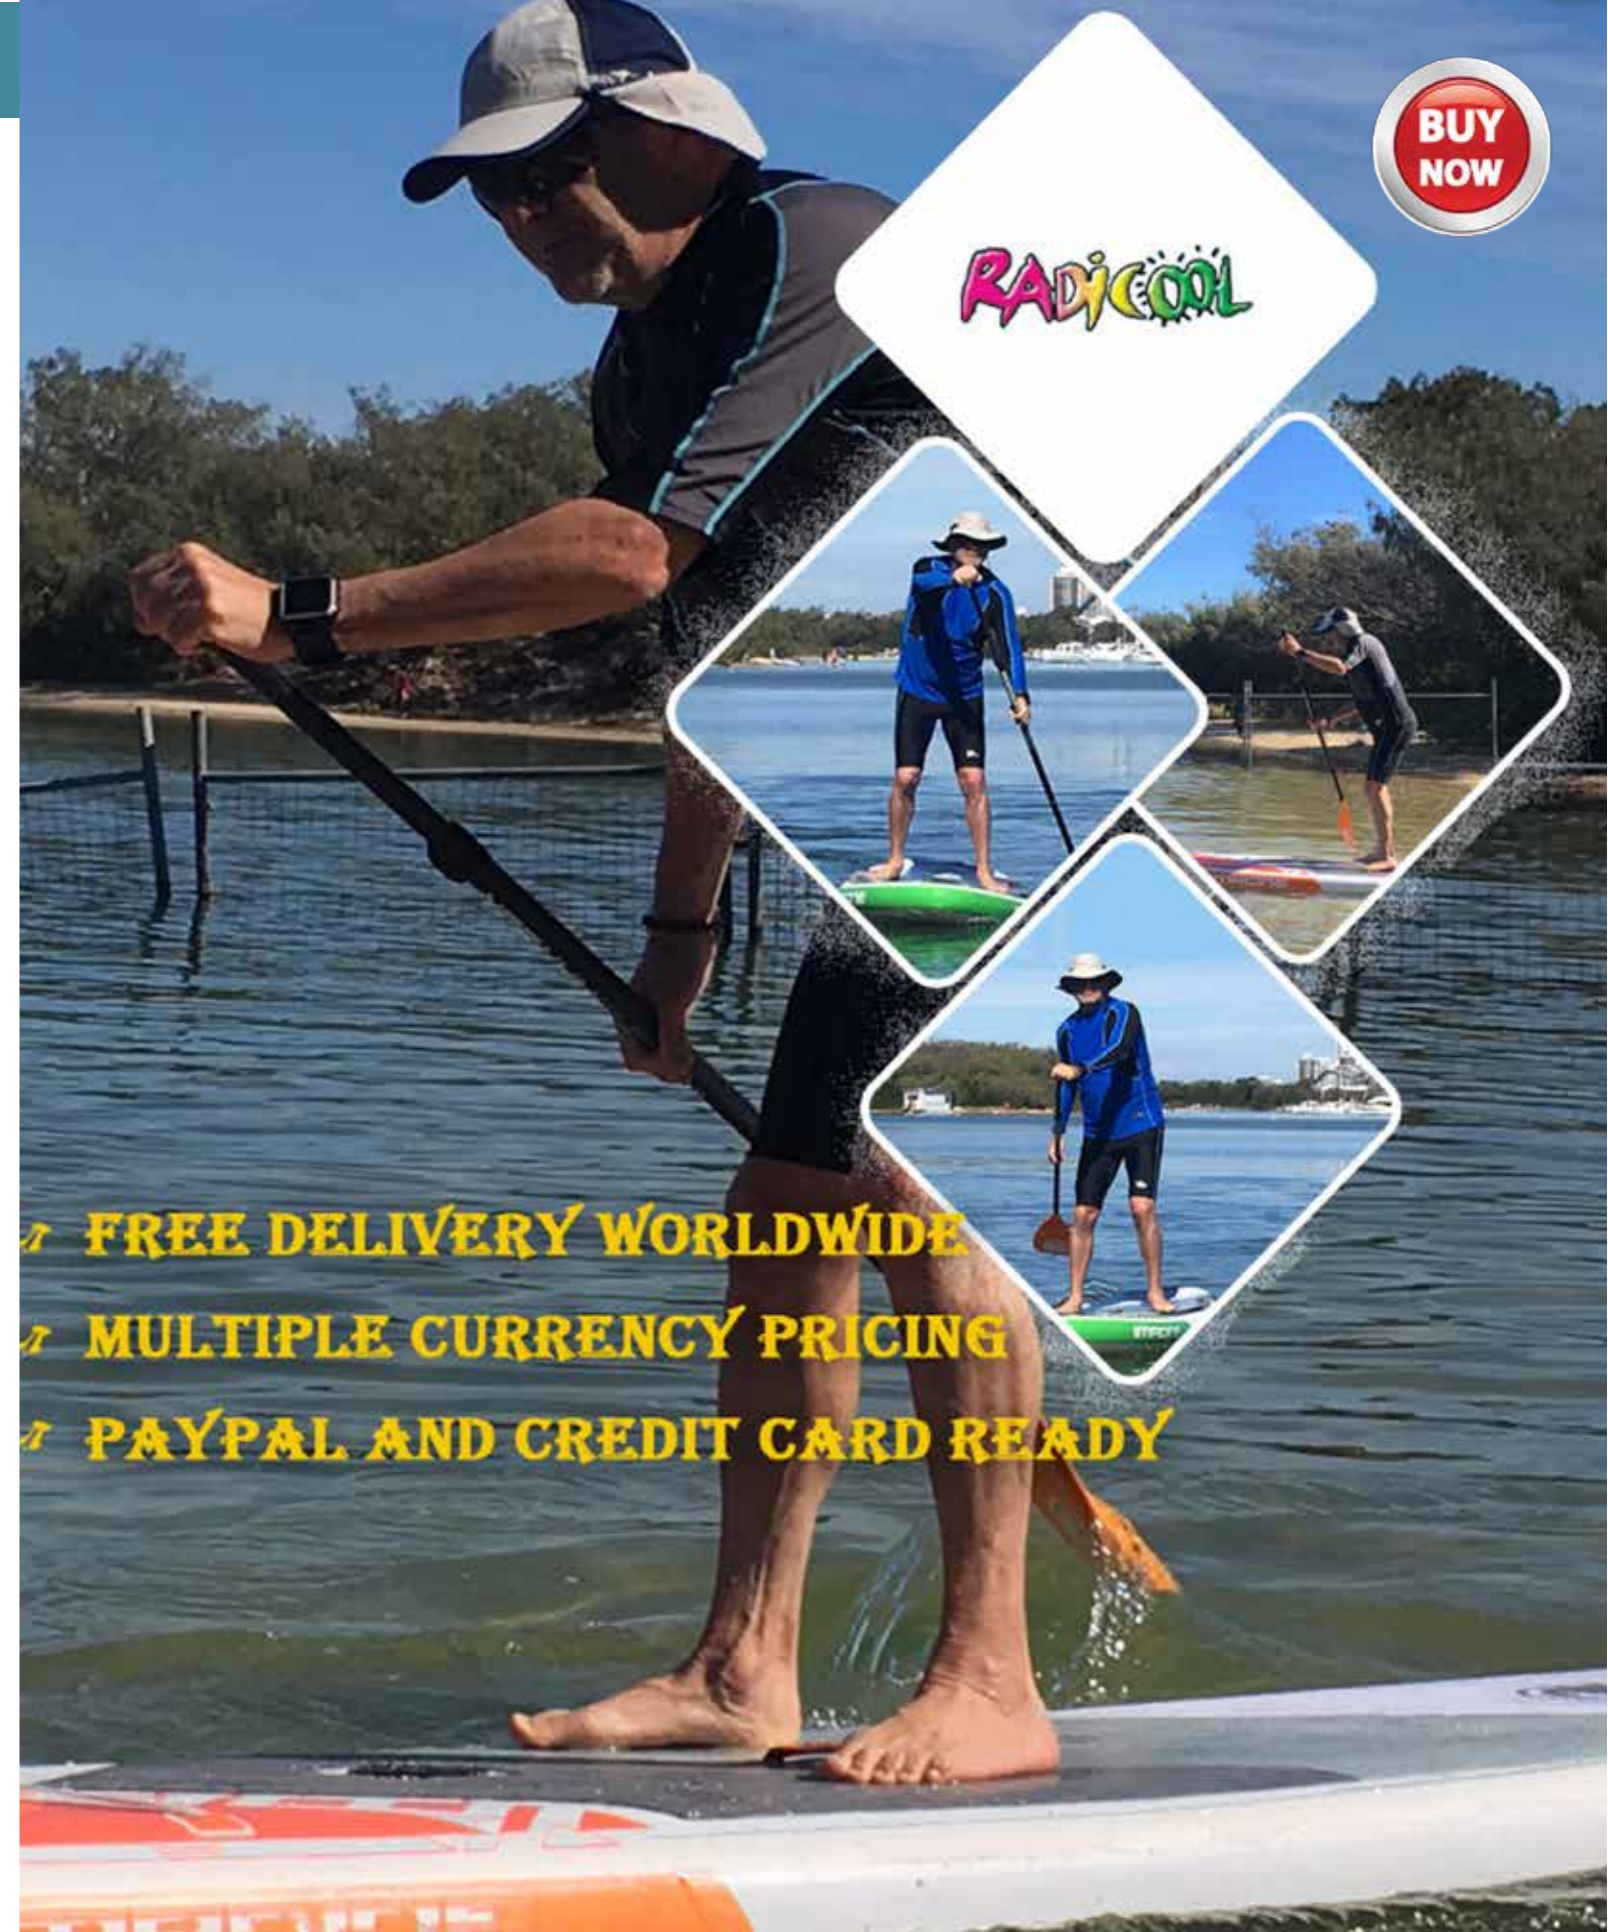

The fabrics used in the Radicool hats are lightweight and tested to rate UPF 50+ providing the best sun protection. Breathable panels and sweat bands that wick the moisture away allow cooler heads to prevail.

Sun protection functionality includes broader brims, flaps that cover the temple, ears and the back of the neck in hats that are comfortable to wear.

UPF 100+ Sun Protection Swimwear

Radicool Australia has its fabric specially knitted for extra density giving it a slightly heavier weight with a higher proportion of nylon in the lycra resulting in the highest UPF rating worldwide.

Features such as higher necklines, longer bodies, elbow or wrist length sleeves and almost indestructible stitching makes these garments the high performance of sun protection swimwear.
